

Report on actual use of congestion income

According to Article 19(5) of Regulation (EU) 2019/943 of the European Parliament and Council of 5 June 2019 on the internal market for electricity, every year National Regulatory Authorities shall inform ACER and shall publish a report regarding the amounts and the use of congestion income.

The total amount of the congestion income from January 1st to December 31st 2020 to the transmission system operator, ČEPS, a.s., reached the total value of 40,04 mil. EUR.

All of the congestion income from the previous year was allocated in pursuant with Article 19(2) b) of Regulation (EU) 2019/943 of the European Parliament and Council of 5 June 2019 on the internal market for electricity, for covering the costs resulting from network investments that are relevant to reduce interconnector congestion.

The income has been used for these projects:

- V490/V491 Přeštice - Vítkov, new power lines
- Substation Vítkov, new substation 420 kV

The network tariff setting is not affected by the congestion income.

The Energy Regulatory Office verifies the congestion income value from January 1st to December 31st 2020 used for network tariff setting is in line with Regulation (EU) 2019/943 of the European Parliament and Council of 5 June 2019 on the internal market for electricity.
